

Software Development

One of our successful software development projects has been the production of a property surveying system for use within the NHS.

The project's aim was to help chartered surveyors collect the vast amount of data they need on various aspects of a particular property, such as a hospital complex.

The overall purpose of the system was to identify future maintenance work within these estates, which frequently ran into millions of pounds of expenditure.

Our client was able to provide their reports in electronic format using the product, which was vastly more convenient for their customers.

This was an important selling point that allowed our client to win commissions from their competitors when bidding for this particular type of work.

The software was built using Microsoft Access, primarily because the client was already using Access and also because it allowed the convenient distribution of the data to our client's customers.

The project was technically demanding, particularly in handling the complicated reporting requirements mandated by the authorities. Several reports contained so much data that we had to work hard to overcome some of the limitations in Microsoft Access.
